Python Full-stack Development
Synnefo Solutions, Iyyattil
Junction, Kochi

ABOUT ME

I am a highly motivated and versatile Python Web Developer specializing in designing and developing web applications using Python-based frameworks like Django and Flask. My expertise spans full-stack development, with a strong focus on backend architecture, API design, and database management. I am skilled in delivering reliable, scalable, and efficient solutions tailored to meet business objectives.

PROJECTS

Supplx

- This eCommerce project is designed to provide fitness enthusiasts with easy access to premium gym supplements that support every stage of their fitness journey. With a user-friendly interface and a diverse range of products—from pre-workout boosters to post-workout recovery—our platform ensures that customers can find the right supplements to optimize their performance and reach their fitness goals.

Croma website(clone)

- Croma website clone designed with a sleek, modern front-end to offer an intuitive and visually appealing shopping experience. With a responsive layout, easy navigation, and vibrant product displays, this clone showcases a dynamic and engaging platform for electronics and gadgets.

Bookmyshow website(clone)

- This project is a fully functional BookMyShow website clone, designed to provide users with a seamless and engaging online booking experience for movies, events, and shows. Featuring an intuitive front-end interface, users can easily navigate through listings, check showtimes, and book tickets in just a few steps.
